comprising the steps of determining the location of a separately housed, second device located near to the first device; providing the location of the second device to the first device; and using the location of the second device as an estimate of the location of the first device, wherein the second device is arranged to perform a function based on its location other than providing its location as an estimate of the location of the first device.

The method of the first aspect of the present invention provides more efficient use of location determining means such as GPS receivers whereby one location determining means is able to service at least two devices. NB. the second device being arranged to perform a function based on its location other than providing its location as an estimate of the location of the first device is not intended to include an embodiment wherein the second device is a standalone location determining means whose sole purpose is to provide the first device with a location fix.

The location of the second device may be provided to the first device using a physical communications link such as a cable joining the first and second devices or, alternatively, using a wireless communications link such as a Bluetooth link.

In accordance with a second aspect of the present invention, there is provided a method of providing an estimate of the location of a first device comprising the steps of determining the location of a separately housed, second device located near to the first device; providing the location of the second device to the first device; and using the location of the second device as an estimate of the location of the first device, wherein the location of the second device is provided to the first device using a wireless communications link, again such as Bluetooth.

A method in accordance with either the first or second aspects of the present invention may further comprise the step of sending a request from the first device to the second device that the second device provide its location to the first device. Where this is the case, and where the first device comprises location determining means to determine its location, the request may be sent when and preferably only when the location determining means is inoperative.
